

MassEVolves Participation Pledge

(Entity Name) is pleased to submit our Participation Pledge with MassEVolves.

(Entity Name) supports opportunities to secure cleaner air and a stronger economy across Massachusetts. Massachusetts has a statewide goal of replacing 300,000 traditional cars with Zero Emission Vehicles (ZEVs) by 2025, and we agree ZEVs will deliver substantial economic and environmental benefits to our state.

We pledge to report and share the steps we will and have taken in support of these goals.

We pledge to explore the potential to purchase at least one ZEV (battery electric or plug-in hybrid) for our fleet as part of the MassEVolves + Leading By Example Electric Vehicle Purchase Challenge for State Entities.

Elements of our goals may include:

- Using ZEVs for our own fleets (either those we own or lease)
 - Conducting a fleet analysis exercise to identify potential vehicles for ZEV replacement.
 - Installing electric vehicle charging at our facilities that can be used by our fleets, employees, and, if appropriate, our customers & community.
 - Promoting the use of ZEVs throughout our vendor supply chain, including those vehicles used on our campuses via subcontractors, service and deliveries.
 - Supporting ZEV use among our employees by supporting purchase/lease incentives and sponsoring at least one annual ZEV information day for our team (and if appropriate, our community) with a MASS DRIVE CLEAN event.
 - Supporting ZEV use more broadly among our customers, community, and visitors to our facilities through our support for charging and participation in ongoing statewide ZEV awareness campaigns like MASS DRIVE CLEAN.
-

MassEVolves will provide recognition for leading entities promoting ZEVs in the state of Massachusetts as well as information resources related to ZEV adoption, including vehicle charging, fleets, incentives, and ZEV-related outreach.

Agreement:

Our reporting will outline anticipated ZEV implementation steps and the broader ZEV deployment goals that guide our efforts. Each year we will share our progress to date for use in case studies and program webinars and will update accordingly.

We recognize that MassEVolves promotes aggressive adoption of ZEVs, including 100% battery electric vehicles, plug-in hybrids, and hydrogen fuel cell electrics, as crucial components of a zero-carbon transport system for our state. In that context, as we develop our ZEV Action Plan, we will remain cognizant of and promote, as appropriate, other low-carbon transport modes such as walking, cycling and public transport.
